

# WATERMART® MULTI-STAGE SYSTEMS

## Clean water without removing minerals

Cleanly installed by Water Quality Association Certified Installers who arrive in a 1-hour window.

For those who want healthy water - but would like a reverse osmosis alternative that does not remove minerals.

- Reduces the vast majority of impurities in our tap water – chlorine, lead, mercury, aluminium, asbestos, pesticides, herbicides, pharmaceuticals, hormones, chloramines, trihalomethanes – the list goes on.
- Very cost effective in the long term. As little as 2 cents per litre of filtered water.
- Installed by Certified Water Quality Association Installers.
- For absolute peace of mind, all systems include a leak prevention system.

### Fluoride, pH & Bacteria:

- A fluoride filter can be added which will remove both arsenic and fluoride.
- An ultraviolet light can be added to remove microbiological contaminants.
- pH: This system does not affect the pH.

### Choice #1: The Watermart Pentair Filtration System:

- Our most advanced filtration system.
- Healthy water! Thorough contaminant reduction: Chlorine, lead, pesticides, hormones, pharmaceuticals, cosmetics...the list goes on.
- BPA free.
- Lead-free designer faucet comes in a variety of finishes to match your taps (Contact us for faucet options).
- Third party certified: National Sanitation Foundation standards 53 and 58.
- Effortless click-in place filters.
- Slim-fit for even the smallest kitchen cabinets.
- Hassle free, neat and tidy installation by a Certified Professional who arrives in a 1-hour window.

### Choice #2: The Watermart Standard Filtration System:

- The same outstanding chemical compound reduction as the Watermart Pentair system.
- BPA Free.
- Lead-free designer faucet comes in a variety of finishes to match your taps (Contact us for faucet options).
- Endless years of service – The highest quality, high capacity standard sized filter cartridges are included.
- All components Certified by the National Sanitation Foundation.
- Hassle free, neat and tidy installation by a Certified Professional who arrives in a 1-hour window.

Both the Watermart Pentair and the Watermart Standard are available in space saving 1 & 2 stage configurations. Contact Watermart for details.

## WHY RENT YOUR WATER SYSTEM FROM WATERMART?

### Economical:

- Cash flow friendly - low monthly payments instead of all at once.

### Hassle free:

- All maintenance is included - no future surprises.
- Any issues (which are very (very) rare) are guaranteed to be solved within two business days or that month is free.
- All parts and labour are warranted for the duration of the rental
- Renting means no worries. We take care of everything.

# WATERMART® UPGRADE OPTIONS

## For under-the-sink water filtration systems

WaterMart®  
Clearly the best

### REMINERALIZING pH BOOSTING FILTER

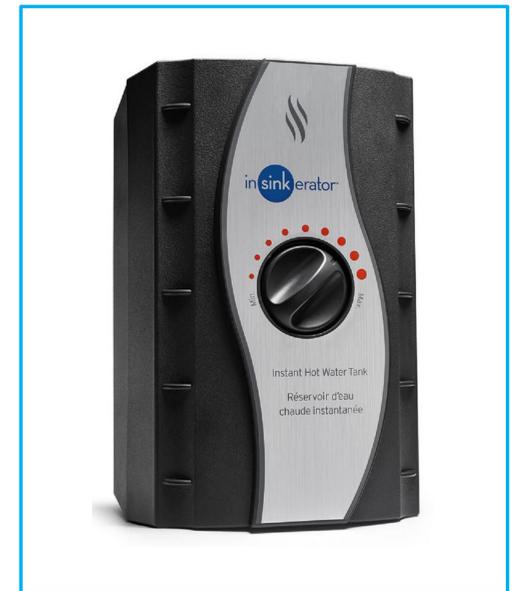

Add a mineralizing pH boosting filter: Many of our clients are natural health professionals and more and more they are advocating the health advantages of drinking more alkaline water. This will give you the best of all worlds – super clean water which contains minerals and is alkaline.

### ULTRAVIOLET LIGHT

Add an ultraviolet light: An ultraviolet light gives added peace of mind. This will protect your family from any threat of bacteria in your drinking water.

### INSTANT HOT

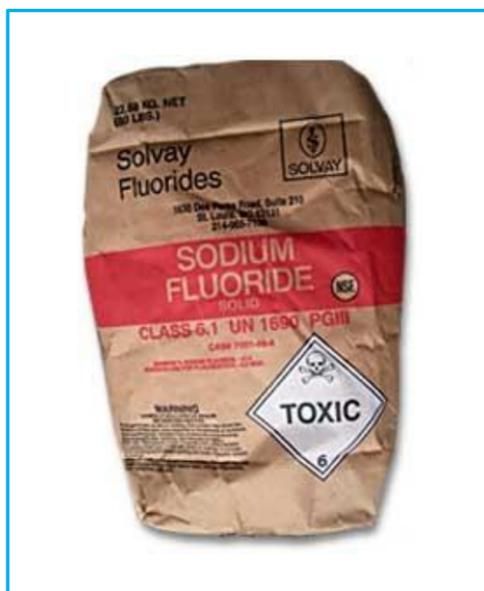

Add hot water: Instantly make coffee, tea, hot chocolate, thaw frozen foods and serve hot cereals. It can help you cook pasta, blanch vegetables, loosen jar lids, remove labels, candle wax and baked on food.

### INSTANT COLD

Add cold water: The Watermart Chiller Daddy creates glass after glass of crisp, cold water. Great for use with any drinking water filtration or reverse osmosis system.

### FLUORIDE FILTER

Add a fluoride filter: Many natural health professionals are choosing to remove fluoride from their water.

### SHOWER FILTER

Install a shower filter: A shower filter will effectively remove chlorine and give you a healthier shower.

# WATERMART® UPGRADE OPTIONS

## Safe installation options for peace of mind

### PRESSURE LIMITING VALVE

Residential pressure usually sits between 55 psi and 65 psi. However, we do occasionally find higher exceptions - and if pressure is high during the day, then during "off peak" hours it can spike much higher. Therefore, if we discover that your incoming pressure is above 80 psi we are suggesting you install what's called a "pressure limiting valve" ahead of the system. This ensures that the pressure stays at a safer level even during off-peak hours.

### LEAK PREVENTION SYSTEM Included with system purchase

Leaks are very (very) rare. However, for those who really want further peace of mind (especially in buildings) we are offering what are called "leak controllers". This is a small sensor which sits underneath a water system and will shut off all water to the system if it detects water.

# WATERMART® MULTI-STAGE SYSTEM MAINTENANCE

## Expected maintenance

All makes and models of drinking water treatment systems must be serviced annually. This is often a surprise to people who will say; “Why? Doesn’t it depend on how much water I use? Or the quality of the local water? The flow rate? How the water tastes? These indicators are all good ones if a household uses a tremendous amount of water. However, with average household water use, often none of these symptoms present themselves (and least not until after years of use). The actual reason for annual service is that all water treatment systems (regardless of make and model) develop non-pathogenic bacteria growth over time which form biofilm and buildup (This growth is called a "heterotrophic plate count" which is a very high brow set of words meaning non-disease causing bacteria).

Just to head this off, I’ve heard many people ask; “Our water doesn’t contain any bacteria. So why would it be in my water system?” Of course this sounds reasonable. The reason it is there to begin with is that all water systems contain carbon - which cannot be disinfected initially (if you add any kind of a disinfectant into carbon, it will just consume that disinfectant and destroy the filter). This means that there is a tiny amount of harmless bacteria within the filters of any drinking water system system to start with.

Why this ends up growing is because every water system on the market reduces the city added chlorine early in the process. And chlorine prevents bacteria growth. So during conditions of low water use and periodic stagnation (and if a system is not properly maintained), this bacteria is free to grow to high levels (which can exceed the Ontario Drinking Water Standards Act requirements) and there is some research that shows it may cause symptoms such as stomach upset, diarrhea & malaise.

The next question people usually ask is; “Wouldn’t I taste it?”. The unfortunate answer is “No”. The carbon filters in a water treatment system will remove taste, odour, colour and chlorine (in that order) long after enough growth has taken place in a system to make it potentially unhealthy.

To prevent this growth, one has to make sure filters are changed at least annually (with high grade filters) and that the system is properly sanitized every time this is done. This is done using an oxidant like chlorine or peroxide (Our technicians use 35% food-grade peroxide).

To make things easy for you, we will call you to remind you when your system is due for cleaning. At this point you will have 3 choices:

1. We can mail you the filters
2. You can pick up your filters
3. We can send a technician to your home to change your filters and sanitize your system. (Most people have us do the service). Our Certified Technicians inspect your system for wear and tear, change any fittings and tubing that may looked old or worn, wash out everything thoroughly, sanitize it from inlet to faucet with 35% food-grade hydrogen peroxide and then perform a pressure test.
