

# WATERMART® WHOLE HOME FILTRATION SYSTEMS

Clean, healthy water from every tap in your home!

## Healthy family water:

- Effective reduction of harmful chemicals such as hormones, pharmaceuticals, cosmetics, pesticides, herbicides and many, many more.
- Chlorine-free – this includes the showers and baths. This means that you won't be bathing in chlorine or breathing chlorine gas.
- Softer skin and longer lasting hair colour.
- Great tasting water from every faucet in the home.
- Keeps dirt from water mains out of your washing machine, dishwasher and hot water tank and extends their lifespan.

## The WaterMart® whole home filtration system is the ultimate home water treatment system.

- Cleans itself, ensuring that over time every glass of water you drink from the system will be as pure as the last.
- Healthy water to all the faucets in your home.
- Properly designed such that there is very little pressure drop - this cannot be said for the majority of whole home filter systems.
- Properly engineered to maximize the reduction of unhealthy chemicals.
- Cost effective - clean water for pennies
- Comprehensive hassle-free warranty.
- Installed by Certified Water Quality Association Installers who arrive in a 1-hour window.

## Options and upgrades for your whole home water filtration system:

- Whole home lead reduction: It isn't just the line to your home that can add lead to your water. Lead is often picked up in the water mains long before it gets to your faucets. This addition ensures that it is stopped as soon as it comes in from the street.
- Whole home sediment reduction: In some older areas we find fine sediment coming from the water mains (most often not enough to see with the naked eye). This can gradually fill hot water tanks, clog faucets and is certainly not healthy. This option will prevent any sediment from getting into your home.
- Use catalytic carbon: Catalytic activated carbon is an excellent option for increasing chloramine reduction, chlorination byproducts and increasing the lifespan of the filter bed.

## Here are a few things that we look for in a whole home water filter:

- Every whole home system should backwash and self-clean periodically (many do not). This ensures the following:
  1. Your flow rate stays high.
  2. There is no buildup of bacteria in the filter itself (home water filters remove chlorine – so a system that doesn't clean itself will get bacteria buildup).
- Carbon beds should be sized at 1 cu.ft. for every 3 gpm of flow. This ensures that you get better than 98% chlorine reduction. Most whole home systems on the market do not offer this.

# WATERMART® UPGRADE OPTIONS

## For whole home filtration systems

### SEDIMENT FILTRATION

The Watermart sediment filter will filter any dirt released from the city plumbing before it can get into your home. This dirt can be caused by road work, construction and water main breaks and repairs. The Watermart sediment filter will prevent sediment from accumulating in your hot water tank and your fixtures.

### LEAD AND IRON REDUCTION FILTRATION

The Watermart lead and iron filter will reduce lead and iron levels significantly. This system is mounted after the whole home carbon filtration system (and after the sediment filter, if installed).

### FLO by Moen

Flo by Moen is a comprehensive water monitoring and shut-off system. Via the app, Flo by Moen provides the ability to monitor and control your water remotely. This system can detect leaks as small as a drip and let you know. It will also automatically shut the water off if ever there is a serious leak. This could save you tens of thousand of dollars.

### CATALYTIC CARBON

Greatly increased chloramine reduction: Chloramines are a combination of chlorine and ammonia added by the city. The city uses chloramines because they last longer in the distribution system than chlorine. However chloramine cannot be removed by boiling, distilling, or by standing uncovered. And some studies show that disinfection byproducts of chloramine are even more toxic than those of chlorine. Using catalytic carbon instead of standard activated carbon will greatly reduce chloramine levels in your water.

Longer lifespan: Eventually all activated carbon becomes saturated and must be replaced. Catalytic carbon will have about a 40% longer lifespan of standard activated carbon.

# WATERMART® WHOLE HOME FILTRATION

## Expected maintenance

Given the average per person water use of 85 gallons per day and an average amount of municipally added chlorine of 0.2 mg/L:

- The activated coconut carbon is expected to last about 3 years.
- Catalytic carbon (one of the upgrades listed above) will last about 5 years.

### **RECOMMENDED ANNUAL SERVICE**

Since our industry began about 50 years ago, water companies like ours have installed systems like the one you have to remove all of the chlorine from household water. This has been great for family health, hair and skin. However, not having chlorine in your pipes can eventually lead to buildup of a harmless biofilm inside your piping. Although this is not harmful, recently many customers have been asking us for ways they can remove it and prevent it. We are making two suggestions:

- Leave your water system bypassed for one week. This will flush chlorinated city water through your piping, hot water tank, etc.
- Install a sanitizing housing immediately after your whole home filter. This creates an easy place where we can introduce a larger dose of chlorine which can clean out your plumbing within a few hours.

Either of these practices should be done once per year.

CERTIFIED WATER EXPERTS

WaterMart®  
*Clearly the best*

## WE ARE THE MOST TRUSTED WATER TREATMENT COMPANY IN ONTARIO.

### Here's how we do it:

- Honesty:** We won't sell you stuff you don't need. No upselling
- Adaptability:** We keep up with evolving technologies and best business practices.
- Expertise:** We have the knowledge, experience and skills required to do a thorough job every time
- Courtesy:** We respect and treat each customer as if they are family
